

Secure USB Hub

- *An ideal solution for organizations where information security is essential.*
- *Easy-to-manage hub is designed to prevent unauthorized access to information from USB ports.*
- *Sets-up on individual workstations and allows only the use of authorized USB devices as designated by your organizations administrator.*

Quick set-up and easy administration has you up and running in minutes

How it works.

Secure USB Hub is locked into any existing USB port on a desktop or laptop. Port locks (included) plug into all remaining USB ports thus requiring all USB access to be completed through the Secure USB Hub.

Connect the devices to be authorized into the EMCON Secure USB HUB. Insert administrator key and register devices via registration button or web interface

Remove administrator key, USB devices are now authorized and operational.

Authorized USB devices can now be accessed by workstation. All other USB devices will not function unless this process is completed again.

Specifications

Ports, Controls and Indicators

Front

Two USB ports (Type A)
Four "Device Enabled" indicators

Rear

Two USB ports (Type A)
Administrator Key port (USB)
USB Registration button
Administrator port (RJ45)
